RDz EXTENSION VSE-SOLUTION "RDz FOR VSE" VSE PLUGIN

Integrates the VSE host system into the development environment RDz.

Offers the possibility for direct access to VSE via 3270 emulation.

Facilitates the definition of a connection to the VSE host system.

Uses the local syntax check for VSE sources (COBOL and PLI), offered by RDz.

Offers access to various subsystems like Librarian, Power, ICCF and VSAM.

Comfortable transfer and compilation of sources on the host via remote compile.

Facilitates access to the message console directly from the RDz Client.

Evaluates error listings locally and shows it in an RDz error view.

Supports own VSE projects with synchronization between local and remote sources on the host.

Allows direct editing of VSE Librarian members on the host without copying it into a local project.

Uses the editors that are available in RDz for editing the project managed sources.
